

Windows 98 IR setup for IR520SA

Connect IR520SA serial adapter to the 9 pin male D type connector of the desktop or laptop PC.

- Before using IR520SA please make sure the motherboard BIOS ACPI function had been **DISABLE**.

For example the AWARD BIOS setting:

Computer power on→Press “Del” key until go into the BIOS CMOS Setup Utility→Move the light bar to the “Power Management Setup” and press the enter key→Move the light bar to the “ACPI function” and set to disable

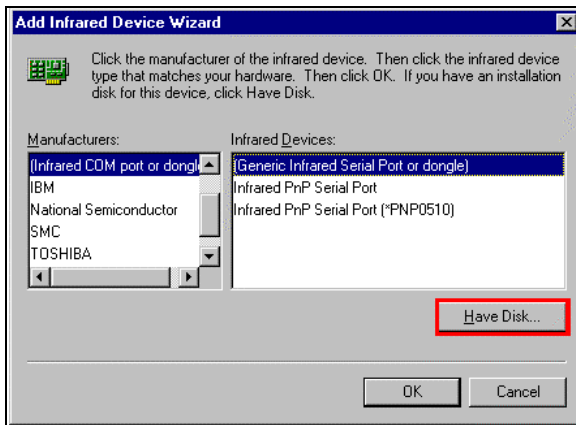

1. Go to “Control Panel” and double click on “Add New Hardware”.

2. Click on “Next” twice, then select “No, I want to select the hardware from a list” then click on “Next”.

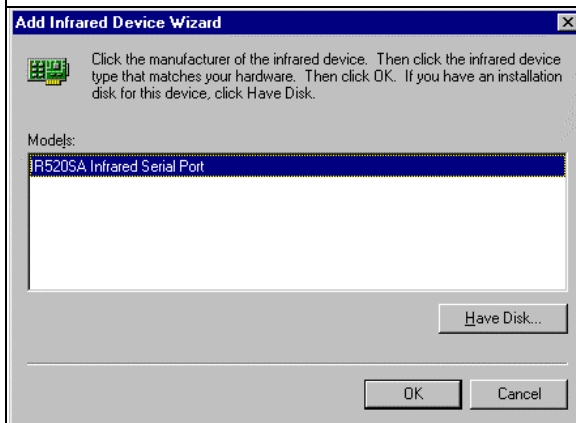

3. Scroll down the menu and highlight “Infrared Devices”, then click on “Next” twice.

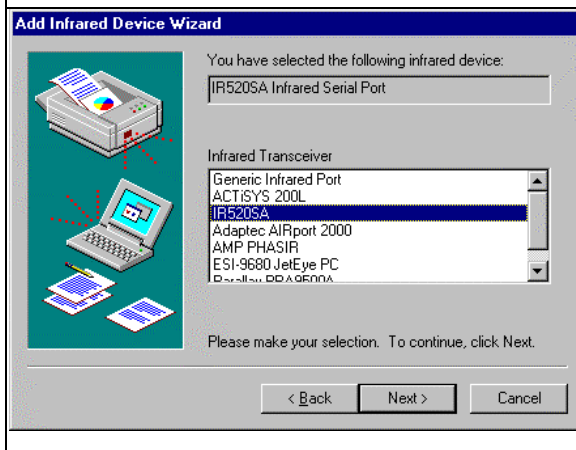

4. Under “Manufacturers” and the “Infrared Devices” Select item, Please click on “Have Disk” button.

5. Fill in the IR520SA driver location area then click on “OK”

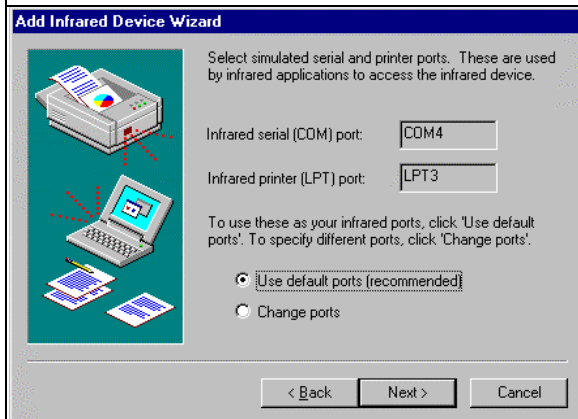

6. Click on “OK”

7. Select “IR520SA” then click on “Next”

8. Select the port which the IR520SA is physically connected then click on “Next”

9. If the Infrared serial port shows “COM4” and Infrared printer port shows “LPT3” then Select “Use default ports (recommended)”. Click on “Next”

10. Click on “Finish”, The driver is installed successfully.

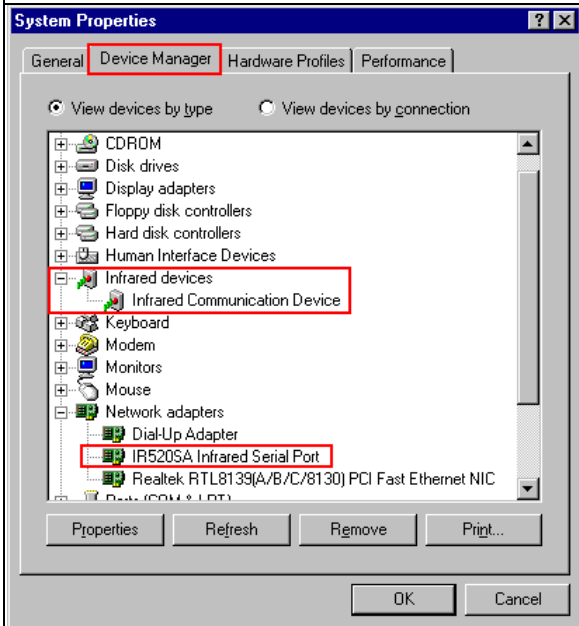

11. Please reboot your computer.

12. When driver installed already, user can find the IR monitor icon on the bottom of the right side

13. If user want to check the driver installed already or not the he can use the mouse point to the “My Computer” icon and click on left key once → Click on mouse right key once → Move the light bar to the “Property” and click on mouse left key

14. Select the “Device Manager” → check the “Infrared devices” and “Network adapters”
